

## SILVER ANODES

### Geometries Available

- Slabs
- Pillows
- Popcorn
- Cones
- Balls
- Dogbones
- Rod

Reliable Corporation fabricates a wide variety of custom and standard silver anodes for electroplating applications. Silver anode form factors include slabs of any specified dimensions, pillows, popcorn, cones, balls, dogbones, and rods. We use high purity fine silver 99.99% for anode production and raw material selection is controlled in-house to eliminate potential problems introduced by antimony, selenium, and other impurities.

Our high purity silver anodes will help you free your silver plating bath of anode polarization, oxidation, and shedding. You will be able to reduce waste and scrap generation and improve efficiencies in your silver plating processes.
